The Rafale Torch Kit

33" PROPANE HOSE AND REGULATOR | PROTECTIVE GLOVES CARRYING CASE WITH FOAM

The Rafale shrink forming gun has a 65kW output with a piezo ignition, making it a powerful and effective tool. The Rafale Torch Kit has been engineered for efficiency and ease of use in demanding environments. Weighing just over 1 kg, it combines ergonomics with reduced noise levels (88 dBA at 1 m) to minimise operator fatigue. The kit features two power levels with fully adjustable heating, enabling precise control tailored to each task. Its high-resistance steel swivel connection prevents hose tangles and premature wear, while compatibility with standard propane cylinders ensures uninterrupted operation.

Operator safety is central to the Rafale design. The secure handle halts the unit immediately when released, while the aluminium nozzle is shielded with double protection to prevent burns. Burners rotate 360° and can be disconnected in a single click, allowing work in any position. Integrated Piezo ignition ensures reliable starts every time, and a foldable fixing hook provides convenient workstation placement. Optional heat deflectors further extend the equipment's adaptability.

Every component of the Rafale Torch Kit has been built for durability and ease of maintenance. The high-quality materials, including treated steel for the swivel connection and aluminium for the nozzle, minimise wear and extend the lifespan of the equipment. Regular servicing is straightforward, supported by accessible spare parts such as Piezo igniters and heat deflectors, ensuring the torch remains safe, reliable, and ready for any job.

SSD-RAFALE-KIT	Rafale Torch Kit

Precautions:

The Rafale Torch Kit should be operated by trained personnel only and kept away from flammable materials. Always check hoses, connections, and the nozzle for damage before use, and ensure the propane cylinder is secure. Wear protective clothing and gloves, maintain proper ventilation, and never leave the torch unattended while lit. Store in a cool, dry place when not in use.

Applications:

The Rafale Torch Kit is designed for precision and versatility across a wide range of tasks. Its adjustable pressure and power output allow operators to tailor heat intensity to different materials, while the robust propane system ensures consistent flame control. Optimised air consumption balances efficiency and fuel use, maintaining reliable operation even during extended work.
